01

Overview

Abstract

- The Online Movie Ticketing System is an advanced, user-focused web application designed to streamline the process of booking movie tickets while enhancing the overall movie-going experience.
- Featuring user-friendly functionalities, the system allows users to register, manage profiles, browse movies, view detailed showtimes and theaters, select seats, and confirm bookings securely.
- Integrated payment systems and an organized booking history ensure convenience, while features like reviews and ratings enable community interaction.
- On the admin side, cinema operators gain powerful tools for managing movies, showtimes, theaters, bookings, users, and insightful analytics, all facilitated by a comprehensive Django-based backend and a responsive HTML, CSS, and JavaScript frontend.

02

Users

Three Users

Admin

- The **admin** functionality includes comprehensive tools for managing movies, showtimes, theaters, bookings, users, and accessing reports and analytics to streamline operations.

Theatre Owner

- The **theatre owner** functionality allows management of specific theater details, showtimes, and seating arrangements,

User

- The **user** functionality offers an intuitive platform for browsing movies, selecting seats, booking tickets, and managing booking history with added conveniences like personalized recommendations and reviews.

03

Modules

Admin

- **Admin Login:** Secure login portal for admins.
- **Movie Management:** Add, edit, delete, and categorize movies in the system.
- **Showtime Management:** Schedule, modify, and manage showtimes for all listed movies.
- **Theater Management:** Oversee theater details, seating capacities, and configurations.
- **Booking Management:** Monitor, review, and manage all user bookings and cancellations.
- **User Management:** View and manage registered users, including role assignment and permissions.
- **Reports and Analytics:** Access insights on user activity, booking trends, revenue, and movie popularity.

Admin

- Notifications:** Send updates and alerts regarding new releases, booking confirmations, and system notifications.
- Review and Rating Management:** Moderate user reviews and ratings for movies.
- Revenue Tracking:** Monitor earnings and generate financial reports based on ticket sales.

Theatre Owner

- **Theatre Owner Login:** Secure login access for theater owners.
- **Theater Profile Management:** Manage theater details, including name, location, and contact information.
- **Showtime Management:** Add, update, and manage showtimes specifically for movies playing in the owner's theater.
- **Seat Management:** Set up and manage seating layouts, including seat categories and availability.
- **Booking Overview:** View and monitor bookings made by users for movies showing at the owner's theater.
- **Revenue Tracking:** Track ticket sales and generate reports for earnings specific to the theater.

Theatre Owner

- **User Interaction Management:** Respond to user reviews, ratings, and feedback related to the theater.
- **Food and Beverage Management:** Optionally manage in-seat services, including food and beverage pre-booking options.
- **Notifications and Announcements:** Send notifications or updates about upcoming shows, special events, or changes in schedules.
- **Reports and Analytics:** Access insights into booking trends, peak showtimes, and movie popularity specific to the theater.

User

- User Registration and Login:** Secure registration and login for personalized access.
- Profile Management:** Update and manage personal information such as name, contact details, and preferences.
- Browse Movies:** Explore a list of movies by categories, genres, and popular trends.
- Movie Details:** View detailed information about movies, including synopsis, trailers, cast, and ratings.
- Showtime Selection:** Choose preferred showtimes and available theaters for specific movies.
- Seat Selection:** Select seats from an interactive seating chart with seat category options.
- Ticket Booking and Payment:** Complete the booking process with secure online payment options.

User

- Order Confirmation:** Receive booking confirmation and ticket details post-purchase.
- Booking History:** Access past bookings, with options to review and rebook.
- Reviews and Ratings:** Provide feedback on movies watched, with options to rate and review.
- Personalized Recommendations:** View AI-driven movie recommendations based on previous interactions.
- Food and Beverage Pre-Booking:** Optionally order food and beverages for the theater experience.
- Customer Support Chatbot:** Use an AI-powered chatbot for assistance with booking, recommendations, and queries.

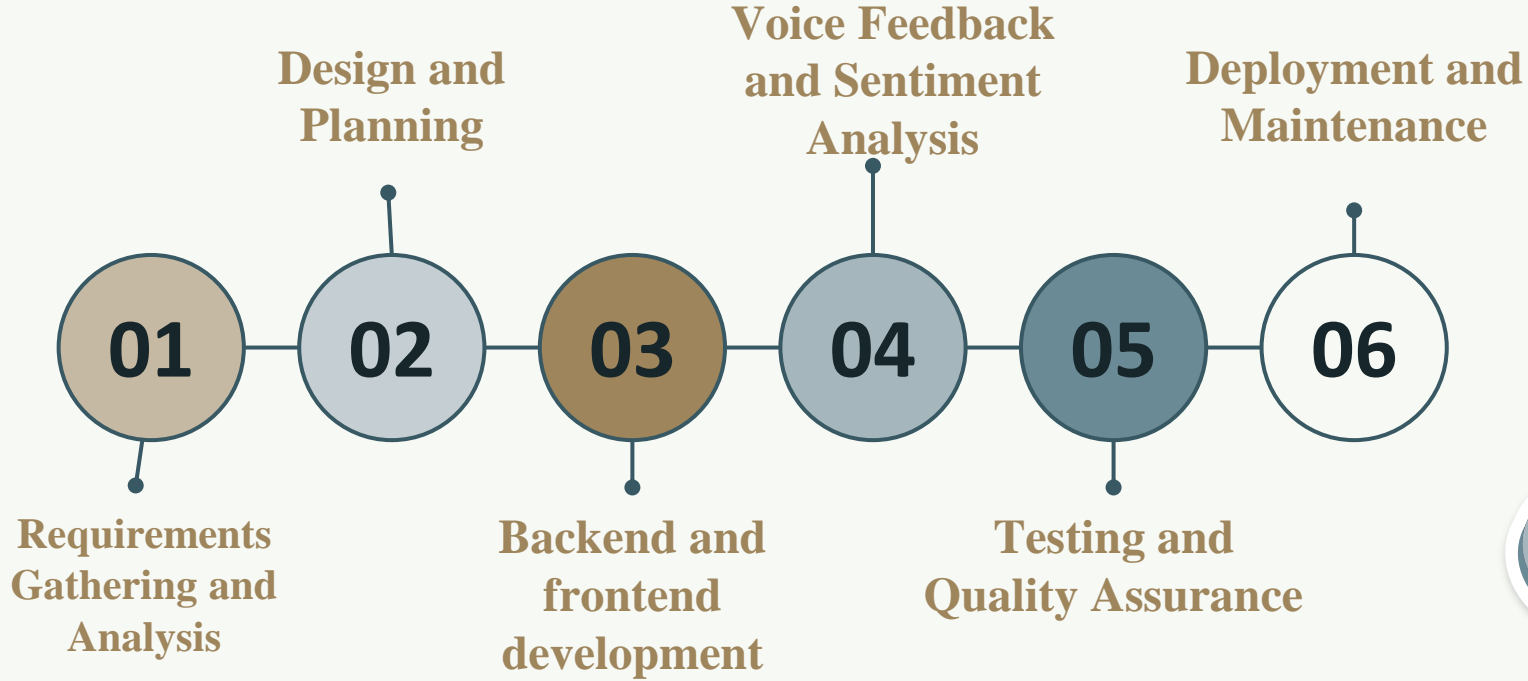

04

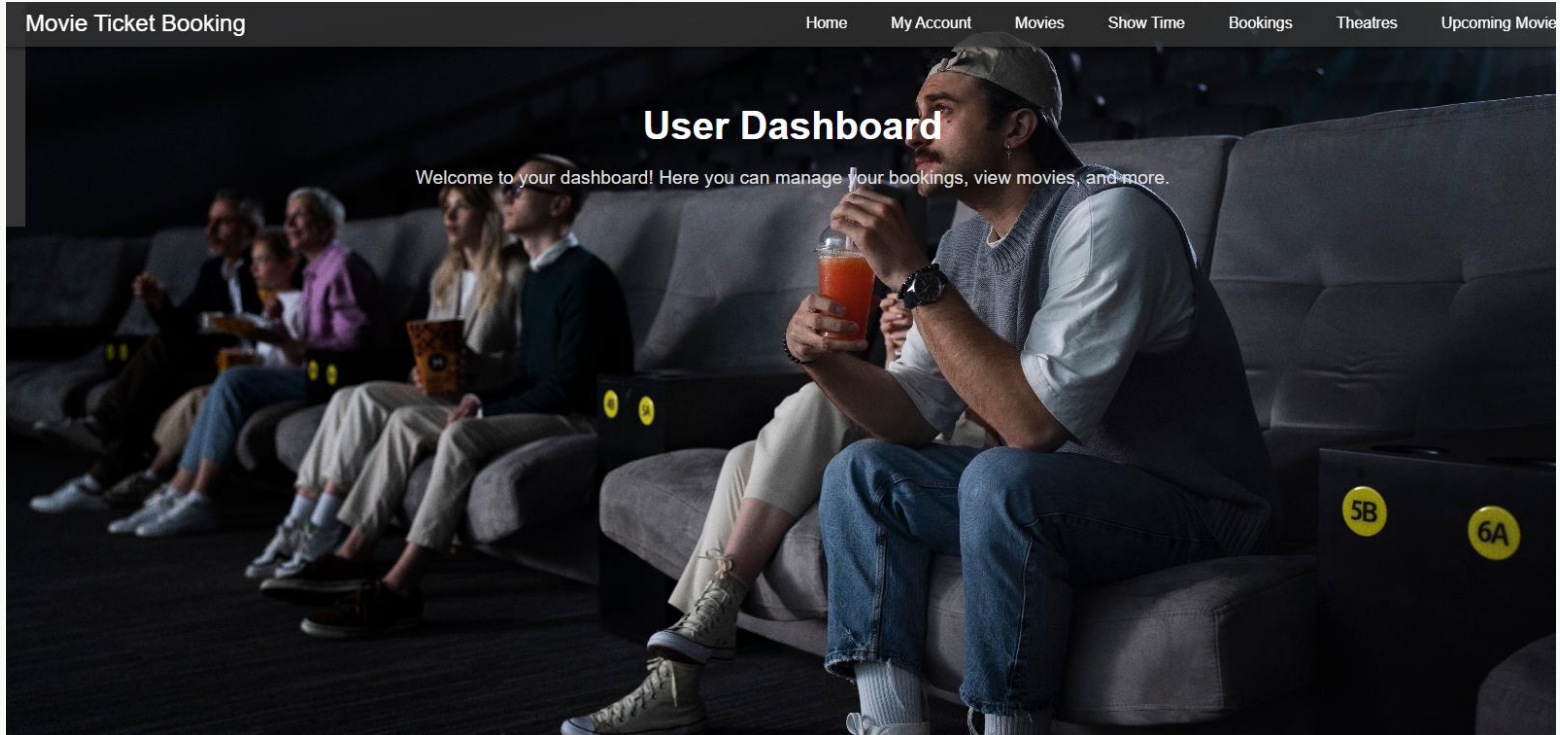

Project Screen

Process

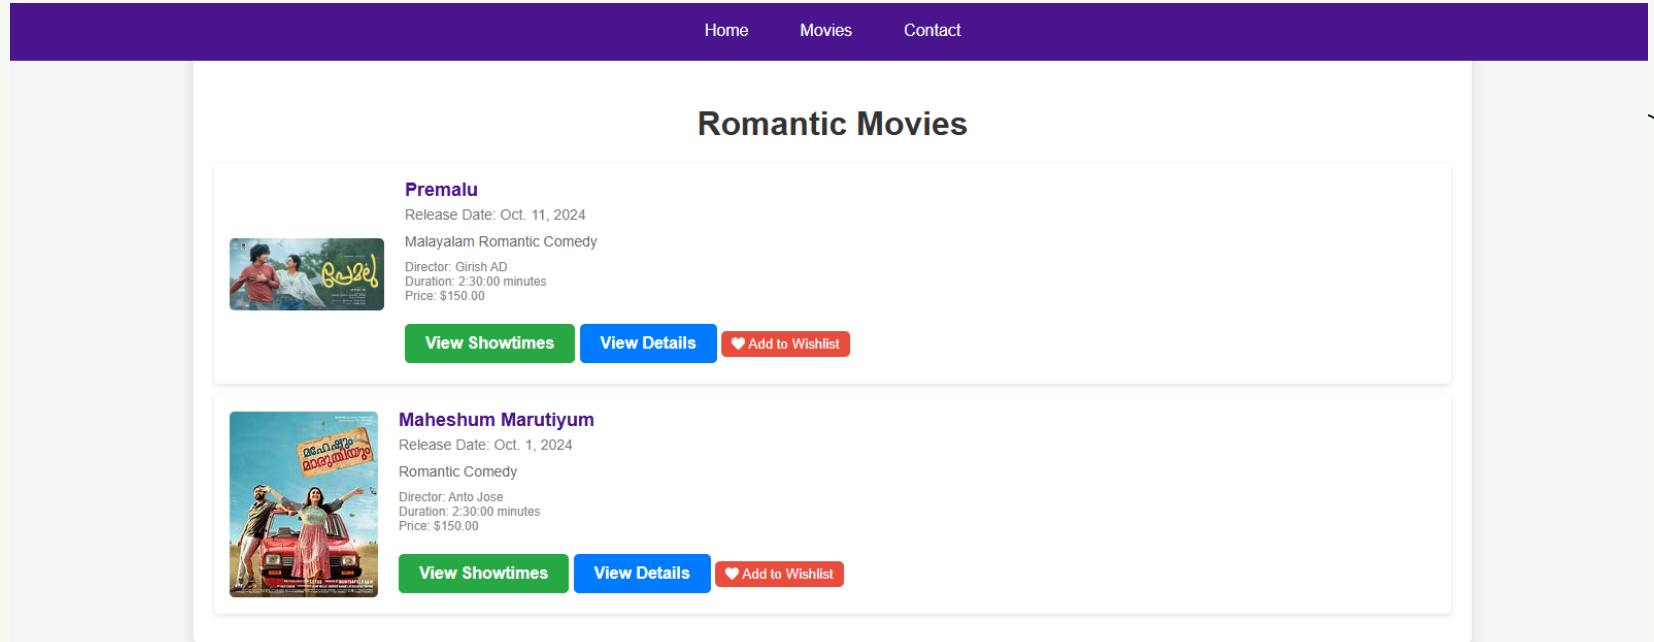

The User Dashboard is a central hub designed to provide users with an intuitive and streamlined experience while interacting with the online movie ticketing system.

Categorization of Movies:

Movies are organized into distinct categories (e.g., Action, Comedy, Drama, Horror, Sci-Fi, Romance) to facilitate easy browsing.

The "Add Movie" functionality is a crucial aspect of the admin module within the online movie ticketing system. It allows administrators to efficiently manage the movie database by adding new films for users to browse and book tickets.

Movies

Add Movie

Serial No.	Title	Category	Release Date	Description	Poster	Director	Duration	Price	Actions
1	Premalu	Romantic	Oct. 11, 2024	Malayalam Romantic Comedy		Girish AD	2:30:00	150.00	<div>EditDelete</div>
2	Maheshum Marutiyum	Romantic	Oct. 1, 2024	Romantic Comedy		Anto Jose	2:30:00	150.00	<div>EditDelete</div>
3	Guruvayoor Ambalanadayil	Comedy	Sept. 26, 2024	Comedy Movie		Ganeshan	2:30:00	150.00	<div>EditDelete</div>

The "View Theatre List" functionality is an essential component of the admin module in the online movie ticketing system. It allows administrators to efficiently manage and oversee the theaters associated with the movie booking platform

Theatre Owner Dashboard				Home	Notifications	Messages
Theatres List						
THEATRE NAME	LOCATION	TOTAL SEATS	ACTIONS			
Bosco Theatre	Kuravilangad	192	Edit	Delete		
Saritha Savitha Sangeetha Theatre	Ernakulam	176	Edit	Delete		
Abhilash Theatre	Kottayam	208	Edit	Delete		

The "View Showtimes" functionality is a vital feature in the online movie ticketing system that enables both admins and users to access and manage showtime information for movies across different theaters. This functionality provides transparency and helps users make informed decisions about their movie bookings.

Theatre Management				Dashboard	Add Theatre	Add Showtime	Logout
View Showtimes							
MOVIE	THEATRE		SHOWTIME	ACTIONS			
Maheshum Marutiyum	Saritha Savitha Sangeetha Theatre		10:00	Edit	Delete		
Premalu	Bosco Theatre		10:00	Edit	Delete		
Guruvayoor Ambalanadayil	Abhilash Theatre		10:00	Edit	Delete		
Maheshum Marutiyum	Saritha Savitha Sangeetha Theatre		13:30	Edit	Delete		
Premalu	Bosco Theatre		13:30	Edit	Delete		

Voice Feedback about the experience by user

Booking Confirmation

Movie: Maheshum Marutiyum

Theatre: Saritha Savitha Sangeetha Theatre

Showtime: 10:00 AM on

Selected Seats: B-16

Total Amount: ₹150.00

Status: CONFIRMED

Payment: Success

Implementation

Aspect-Based Voice Feedback Sentiment Analysis

Purpose: The implementation of aspect-based voice feedback sentiment analysis aims to capture and analyze user sentiments about specific aspects of the movie experience (such as seating, sound quality, movie content, and theater facilities).

By enabling users to provide voice feedback, the system can interpret sentiments more intuitively, fostering a richer user experience. The insights gathered help theater owners and admins improve service quality by identifying areas that need attention, ultimately enhancing customer satisfaction and personalizing the user experience further.

Aspect-Based Voice Feedback Sentiment Analysis

Voice Feedback Integration

- Objective:** Capture and process user feedback via voice to enhance accessibility.

- Steps:**

- Speech-to-Text:** Convert user's voice input into text using APIs like Google Speech API or Speech Recognition library in Python.

- Text Preprocessing:** Clean the transcribed text by removing noise (like filler words) and applying NLP techniques.

- Tools and Technologies:**

- Mention libraries such as Speech Recognition for capturing voice input, and NLP libraries like NLTK or spaCy for text cleaning.

- Benefits:** Emphasize improved accessibility, real-time feedback, and reduced typing effort.

Aspect-Based Voice Feedback Sentiment Analysis

Sentiment Analysis Process

•**Objective:** Analyze feedback (voice/text) to understand user sentiment, whether positive, neutral, or negative.

•**Implementation Steps:**

•**Text Cleaning:** After speech-to-text, remove stop words, punctuation, and perform lemmatization.

•**Feature Extraction:** Use techniques like TF-IDF (Term Frequency-Inverse Document Frequency) or word embeddings (Word2Vec, BERT) to represent textual data numerically.

•**Sentiment Detection:** Classify feedback as positive, negative, or neutral using sentiment analysis models.

Aspect-Based Voice Feedback Sentiment Analysis

Workflow Diagram

- Include a visual diagram showing:
 - **Voice Input → Speech-to-Text → Text Processing → Sentiment Analysis → Dashboard Display.**
- This provides a clear, step-by-step representation of the implementation flow.

07

Future Enhancements

Future enhancements for this movie ticketing system could include expanding voice feedback capabilities to support multilingual processing, allowing users to provide feedback in various languages, further broadening accessibility. Enhanced sentiment analysis could involve fine-tuning models to better understand movie-specific sentiments, such as genre preferences or visual effects.

Implementing advanced aspect-based sentiment analysis can provide more granular insights, helping administrators identify and address specific areas of user concern, like theater ambiance or seat comfort. Additionally, real-time feedback analysis could be introduced to enable instant response to negative sentiments, fostering a more interactive and responsive user experience. Finally, incorporating predictive analytics for sentiment trends could help anticipate user needs and improve service recommendations.

08

Conclusion

- In conclusion, this online movie ticketing system offers a robust, user-centered platform that streamlines the ticket booking process and enhances the movie-going experience. By integrating functionalities for users, theater owners, and administrators, the system fosters smooth operations and improved user engagement. The inclusion of advanced technologies like voice feedback and sentiment analysis provides valuable insights into customer satisfaction, enabling more personalized services and proactive responses to user needs. As the system evolves, future enhancements in sentiment analysis and predictive feedback will further elevate the platform's responsiveness and accessibility, establishing a truly dynamic and immersive movie booking experience for all users.
